

**Waterproofing  
of an  
existing & occupied  
terrace (fixed with  
china mosaic tiles)  
by Chemical  
Treatment**

## Pre-Condition of the terrace

**While cleaning the terrace  
with biocides / acid wash**

After the cleaning of the open to sky terrace with biocides / acid wash.

## Floor crack identification and widening them up to 1inch in width

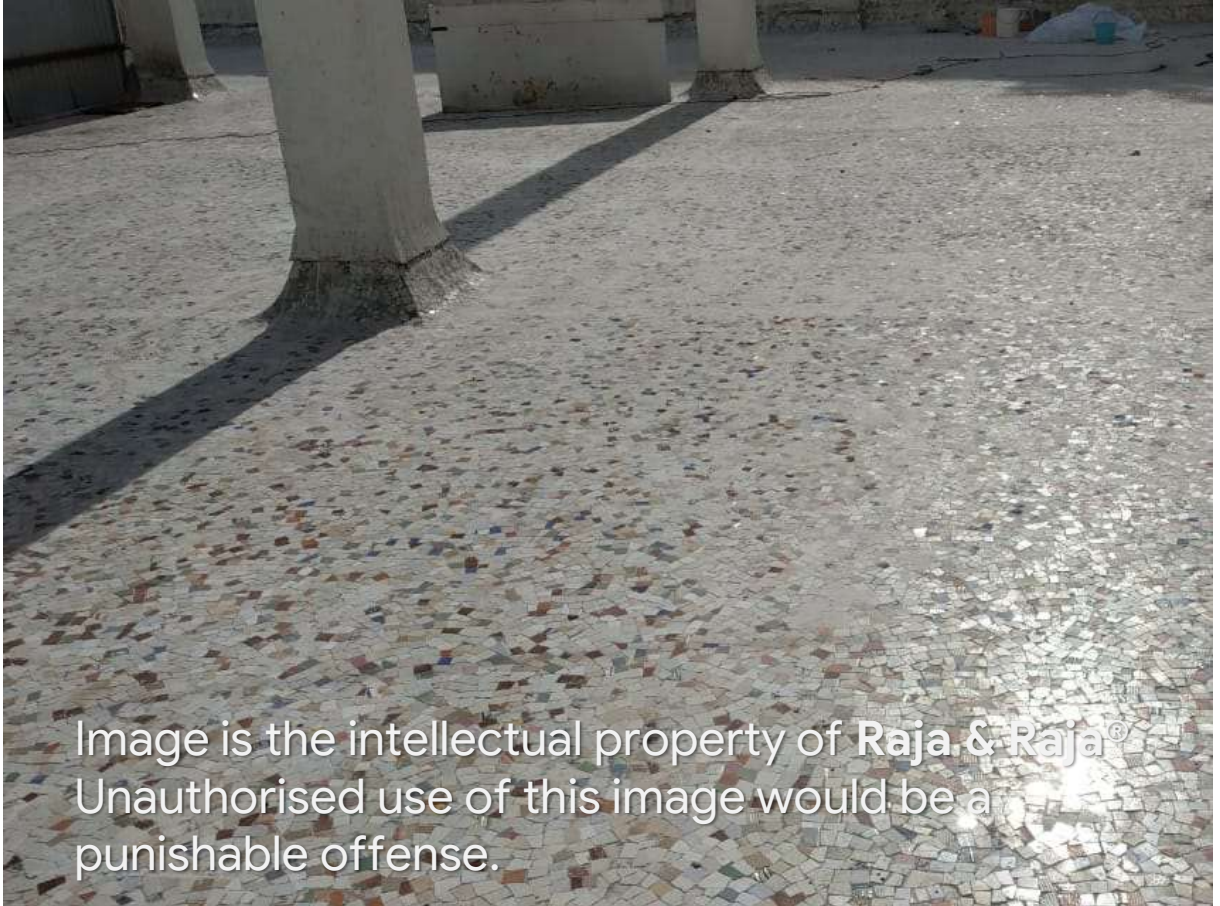

## Crack-Filling treatment using polymeric treated free- flowing mortar

## Covering the crack with the Prot-strips to ensure crack sealing

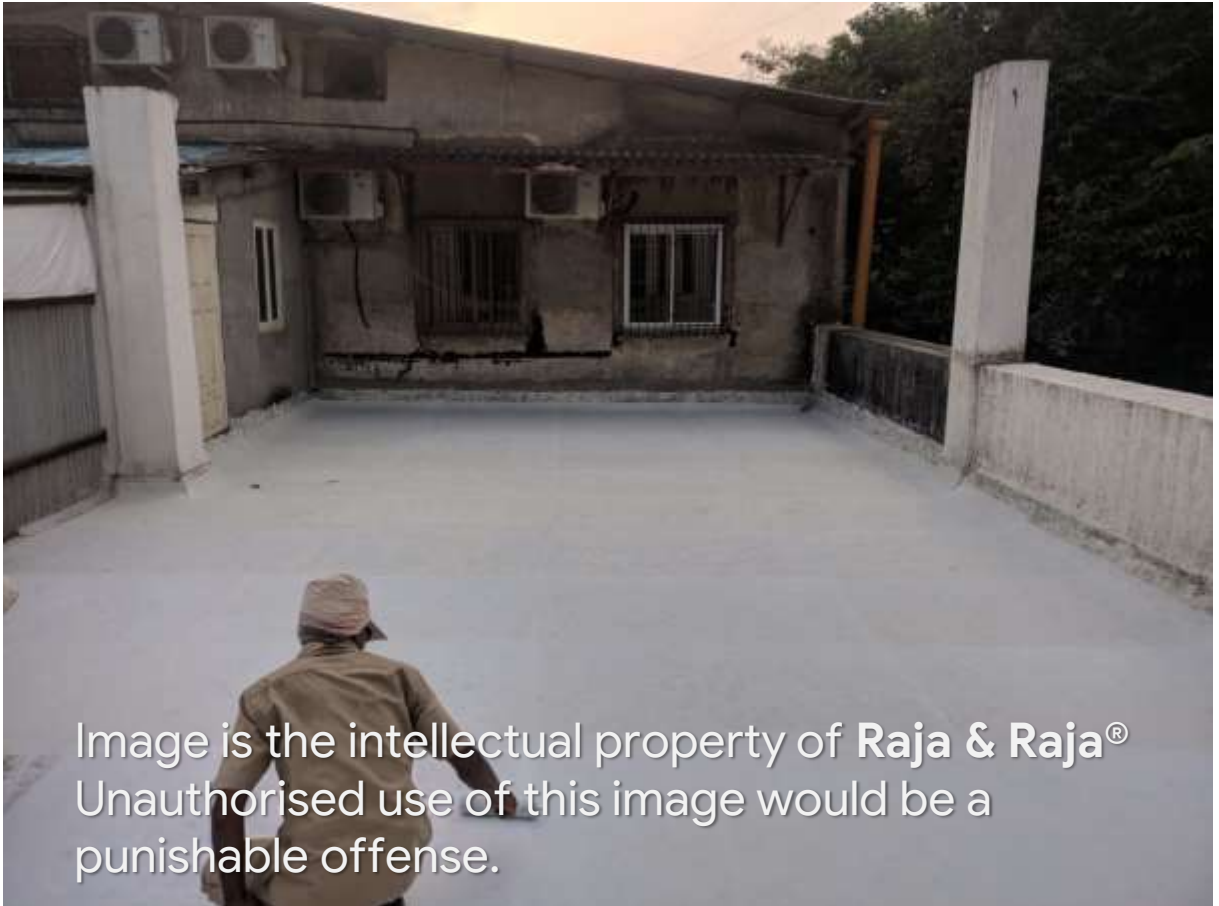

**Application of the Primer  
(There are very few primer  
which adhere on the ceramic  
and last there)**

**While application of chemical coating part of terrace**

## While application of chemical coating

**After completion of chemical  
coating at terrace (1<sup>st</sup> coat;  
often known as base coat)**

After completion of chemical  
coating at terrace (1<sup>st</sup> coat;  
often known as base coat)  
(*angle 2*)

Application of the Protective  
top coat above the  
Waterproofing coating for  
protection from damage by  
traffic and UV degradation.
